Understanding graphs, charts and visual representations

STUDENT HANDOUT

Work with your group members to research, prepare and practise a teaching session on understanding graphs, charts and visual representations. You will have 20 minutes in which to deliver your teaching session to your peers, when we next meet. There will also be some time available at the end of the session for discussion, questions and to evaluate each group teaching session.

Your teaching session can cover any aspect of understanding graphs, charts and/or visual representations. The focus, structure, style and delivery method are group choices and you can use any equipment, materials and props that you deem appropriate. Ensure that your teaching session is interesting, informative and creative. Your peers should learn from your session and should be engaged and interested in what you are teaching. You will also sit through teaching sessions delivered by your peers so you can learn more about the topic and will be able to ask questions based on what you already know.

Learning outcome: By the end of this activity you will have a deeper understanding of graphs, charts and visual representations and will feel more confident when approaching and using this type of material during your studies and beyond.
