

Milwaukee Police Department- Violent Crime Hotspot Analysis

January 1, 2007 through June 30, 2014

The above map represents violent crime in the City of Milwaukee from January 1, 2007 through June 30, 2014. Violent crimes were retrieved from the Milwaukee Police Department Daily Crime and Service and count incidents for homicide, rape, robbery, and aggravated assault. The dark blue areas represent "Persistent Cold Spots", whereas the light blue areas represent "Intensifying Cold Spots". The red areas with the blue stripes represent "Oscillating Hot Spots" and the light red areas represent "Diminishing Hot Spots". The dark red areas represent "Persistent Hot Spots" and fall just outside or near the boundaries of the Neighborhood Task Force (NTF) areas. The north and south NTF areas (red outlines) represent the areas of the city with the most major crimes, calls for service, poverty, vacant / foreclosed properties and other demographic disparities. Therefore, these areas receive the most police response, attention and allocation of resources. Proactive activity including traffic stops, subject stops, bus checks, park and walks, problem oriented policing projects, street safe initiatives, grant programs and more have helped "diminish" violent crime in the NTF boxes since 2007.
