

1. Chapter 8 – Accuracy and Efficiency in Social Interference

2. d. None of the above
3. d. A normative model
4. c. A normative model
5. d. Experts' intuitions
6. d. All of the above
7. a. The limited capacity of people to process information, which leads them to rely on heuristics
8. c. When the preexisting theories are suspect
9. b. Large samples are more reliable to make population inferences
10. d. All of the above
11. c. The offspring of two extremely tall parents will be less tall than the parents
12. b. The dilution effect
13. a. Tell them that you will later ask them to justify their predictions
14. d. None of the above
15. b. Laboratory byproduct
16. b. Nisbett & Wilson
17. a. When integrating information to reach a decision using a constant decision rule, a computer will most likely outperform a person
18. b. People can reach accurate judgments within seconds
19. d. All of the above
20. c. Which computer keyboard to buy
21. d. Illusion of control
22. a. Research has shown that people follow primarily rational inference processes
23. a. Making a "pros" and "cons" list
24. b. Cue utilization
25. d. All of the above
26. c. Both A and B
27. a. The posterior cingulate cortex
28. d. All of the above
29. b. The dopamine system
30. a. The distinction between automatic and controlled processing
