

RULES: This game is for 2 or 3 players.

You need a die, a token for each player, paper and pencils and coins.

Take turns to throw a die and move around the board. When you land on a number, write down all the factors of that number **except** one and the number. Read out your list, using the word 'factor' each time (e.g., if you land on 26, say: '2 and 13 are **factors** of 26'). If your opponents agree with your list, take coins to match the value of each factor.

The game ends when all players have been round the board twice. Sort your coins into stacks worth 10 to find the winner.
