MOTOR VEHICLE THEFT	8	5	-38%	2	3
	70	70			

Note: We had an increase in Residential Burglaries last week. There were two in Sector F, one in Sector A, one in Sector C, and all the rest except for one are in the Northern part of our City. Three are along Bastanchury Road East of Euclid and West of State College. We might want to get some extra patrols up there whether they be RSVPs or Patrol Officers, give some of the purple/dark red prediction areas some extra attention, and look at the increase in crime in Sector F.

RAP Report looks at last week's crime compared to the week before to see if crime is increasing and gives us a chance to combat an upcoming issue before it becomes a problem.

1/26/2015

Map below shows the past two weeks Residential Burglaries.

ATACRAIDS' Predicton Zone is superimposed on the map.

Prediction Zone identifies areas where there will likely be a concentration of crime.
The "hotter" the color the more likely a concentration of crime will be in that area.

Prediction is for this coming week only, is based on all Residential Burglaries from the past 11 weeks and has an accuracy rating of 54%.
(There is a 54% chance that a Residential Burglary will occur in the colored area this week.)

The optimum number we are looking for is 100%, but in social sciences, anything greater than 75% is very reliable, anything between 75% and 50% is "fairly reliable", and anything less than 50% is not very reliable.

RAP Report looks at last week's crime compared to the week before to see if crime is increasing and gives us a chance to combat an upcoming issue before it becomes a problem.
